

Shred-It – WhitePaper.

INTRODUCTION.

This document describes the functions and use of the software application **Shred-It**

Shred-It has been developed to irretrievably remove computer files from your PC or Server hard drive or floppy disk to prevent even the most sophisticated data forensic tools from retrieving them. **The most secure way of removing sensitive information from your PC's Laptops and Servers – PERMANENTLY.**

Protects against:

- Unauthorised access to documents files and directories that have been deleted from your system.
- Document retrieval after deletion.

How does Shred-It work?

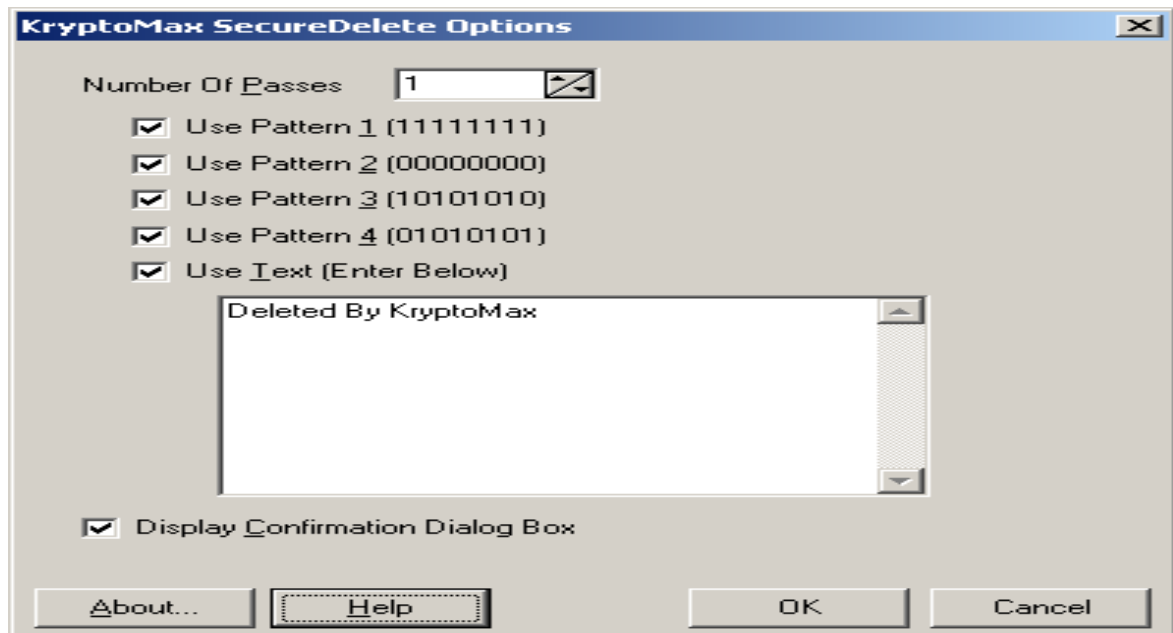

- To permanently remove a file from your system, simply use the right button of your mouse and select Secure Delete.
- Alternatively, drag the item to the Secure Delete bin on the desktop.
- Your information is removed and the space on the Disk where it was located is overwritten several times with patterns of data that are user configurable.

Programmable options:

- You decide how many times you want to overwrite the disk and what information you want to put there.
- Deletes all file types – even Cookies.
- Deletes folders and directories – just right click on them.
- Delete multiple files quickly and easily – drag them into a folder and delete the folder.

Who should use Shred-It?

- Anyone who wants to ensure commercially confidential information or private and personal files cannot ever be viewed again.
- Ideal for corporate, education, government and public sector markets.
- Essential purchase for any individual who is concerned about the security of deleted documents
